

PROTECT YOUR FAMILY FROM RADON

Radon is a gas that you can't see, smell, or taste - but it can be dangerous. It's the second leading cause of lung cancer in the U.S.

FREE testing proudly offered by the Health Department and NJDEP

Radon is in the ground naturally. But sometimes it enters homes through cracks in the floors or walls

1 IN 15
homes have high radon levels

TEST YOUR HOME FOR RADON

Testing is easy and no-cost — and it could save your life!

Testing your home is the only way to find out if you have a radon problem

If you do, then you can fix it.

WHY IS RADON DANGEROUS?

There's always some radon in the air around us. The problem is when radon gas from underneath a home leaks in through cracks or gaps.

SMOKING MAKES RADON EVEN MORE DANGEROUS

Smokers who live in homes with high radon levels have a risk of lung cancer.

ANY HOME CAN HAVE A RADON PROBLEM

High radon levels can be a risk anywhere in any state. With family members home more frequently this year, we call upon all residents who have not yet tested, test their homes for radon in order to reduce if elevated levels are found, to protect their families from the serious health risk of radon.

To assist residents with Radon testing of their home, Radon kits are available at the Municipal Building **free of charge** January 01, 2021 to March 31, 2021.
